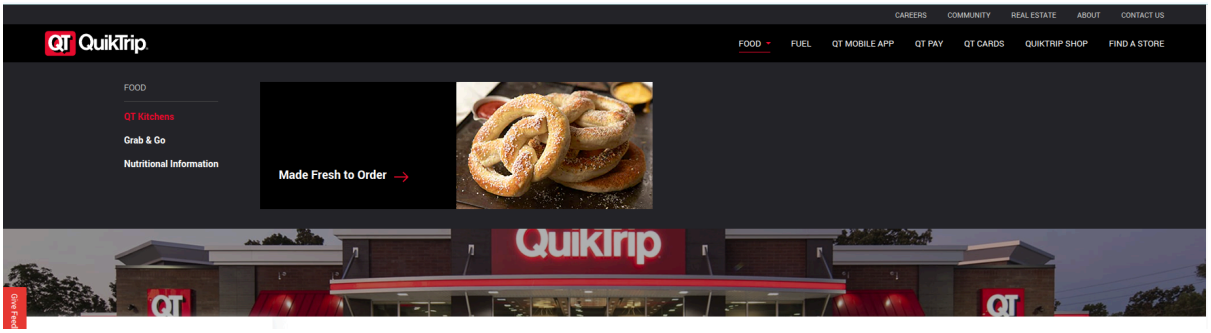
Oswaldo Bayona - Web development experience

I am a WordPress Developer experienced in custom theme and plugin development. I have worked with Custom Post Types, Taxonomies and hooks. My workflow includes using Bedrock and Composer for dependency management and version control, though I also maintain standalone installations. I implement complex data structures via ACF and manage site functionality using Elementor with custom Widgets, Wordfence, Gravity Forms and other common plugins. On the infrastructure side, I have deployed to WPEngine and managed VPS environments using Docker to containerize and orchestrate multiple WordPress instances on single hosts.

WordPress websites:

http://quiktrip.com/ (US only access, use VPN)

I implemented custom Elementor Widgets used on the static pages like home, contact, qt-pay, etc. I also implemented the custom main mega menu using advance custom fields ACF and React. Additionally, I implemented custom post types and taxonomies for the items and categories and its corresponding templates. I was the main developer on this project but I collaborated with another colleague.



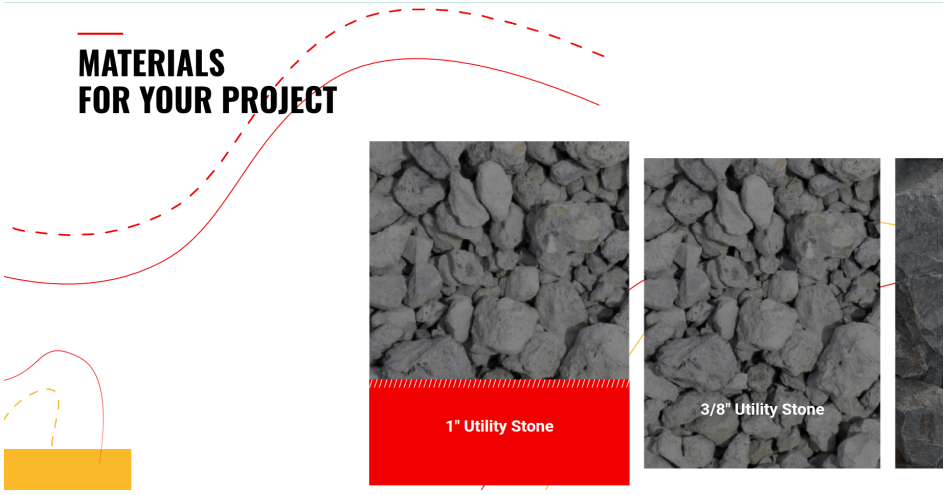
(Mega menu)

https://resources.pepsicorecyclerally.com/

WordPress website implemented with Elementor custom widgets. I also used React for the custom search menu which has a different, more interactive behaviour on mobile. I used custom post types for the different kinds of resources: articles, presentations, videos, documents, external links, etc. I implemented a script to import the resources data from the previous website. A custom WordPress API was implemented for the like, dislike feature. A custom plugin was implemented to store the resources on a s3 bucket. I collaborated with the 2 server architecture with a load balancer that allows the site to be up if one server fails.

(Mobile menu)
https://mccarcompanies.com/

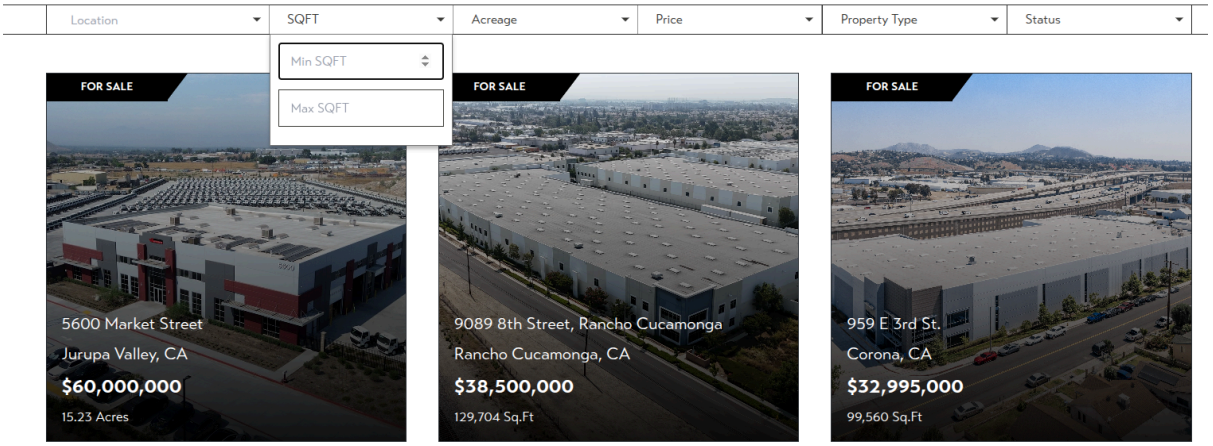
This website was implemented mostly with ACF since each page has unique designs that are not suitable to split by sections or widgets. Custom templates were implemented, React was used for the scroll and svg animations. Plugins like Gravity Forms were installed for contact forms.



(Section with scroll animation)

https://macleodco.com/
This is a website for searching properties. ACF and custom templates were mostly used. The home page is a Full Page Slider implemented in React. Custom post types were implemented for the Properties. A custom WordPress API was implemented for the search capabilities

Listings



(Searching capability)

https://greenspointdental.com/

Website for a dental clinic implemented in WordPress with ACF and Elementor. I was not the main developer but I contributed on misc task like improving style on home page. Fix responsive errors.

https://www.fahrenheitmarketing.com/

I worked on this agency and I contributed to its page re-factoring. Improving style and made it more easy to navigate. Elementor custom widgets and ACF were used. I did misc task like the home page, the about page, the blog template, etc.

https://www.driveezmd.com/

WordPress website implemented in Elementor. I was not the main developer but I have fixed bugs; update plugins; update PHP among other style improvements.

https://www.metroexpresslanes.net/

I was responsive to update the plugins, fix errors and make small changes. I also implemented a custom plugin to schedule maintenance mode. I also managed its infrastructure (DigitalOcean load balancers and servers).

https://www.ncquickpass.com/

WordPress website implemented with Elementor. I was responsible for update its plugins, small changes and fix bugs.

https://www.chilantrobbq.com/
I worked on updates. Style changes. Also I integrated Olo to have an ordering app, but it is deprecated now.

https://sageblossommassage.com/
I implement the home page re-design with SiteOrigin page builder.

Other Projects:

app.tracknotion.com
Call tracking software with AI capabilities. I implemented it in Laravel. Uses react for complex UI like the call flow builder, a page where the user can drag and drop nodes to build the flow. I implemented the billing and other critical modules.

https://www.uhc.com/
I contributed with the migration from AngularJS to React + Redux.
